

Technical Service & Lighting Design

LIGHTING OF LONDON

Who We Are.

We are a collective of individual lighting experts, working together to achieve desired and outstanding results.

We bring together over 25 years of experience and our goal is to provide a complete technical service and professional guidance on lighting design. Our team is dedicated to working on some of the most prestigious projects, and it includes electrical designers, lighting designers, installation experts, and product specialists.

What's At Our Core.

Lighting Designers

We have a reputation for creating exceptional lighting designs that are timeless classics. We merge elements of brilliant creativity and technical expertise, with careful consideration for the architecture, interior design, and the story that is situated behind every project.

Electrical Designers

Our electrical designers collaborate with our lighting designers to create designs that have the ideal technical breakdown. We provide services such as separation of circuits, deployment of control methods, and compliance with electrical and building regulations to ensure that every design is perfect.

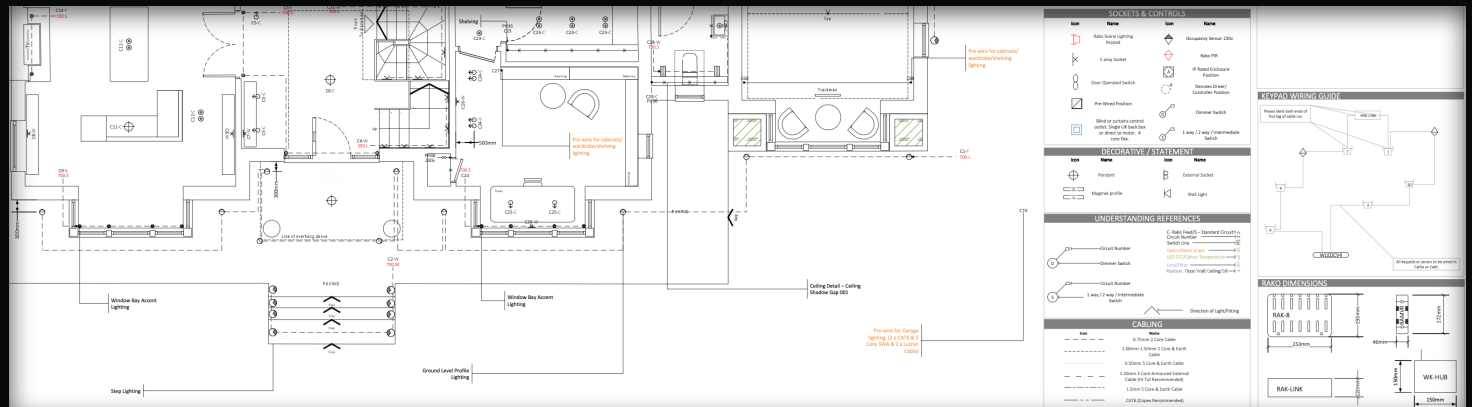

Product Designers

All of our products are designed in-house by our dedicated team of product designers. They ensure that each product is not only unique and beautiful in design, but also will seamlessly integrate into any setting.

Manufacturing Experts

We take pride in using only the best quality materials and precision engineering techniques to create our products. This not only ensures that our products are durable and reliable, but it also guarantees that the light output will not diminish for many years to come.

What is a Technical Service.

To ensure that a lighting design plan is properly executed on-site, it is crucial to document all necessary technical details on the plans. This will enable the electrical contractor to refer to the information throughout the entire process and ensure that the lighting scheme works perfectly.

What We Do.

Product Specification

All Lighting of London products are technically detailed on the drawing, allowing for reference at any point throughout the installation process.

Driver Placement

Depending on whether you require a constant current or constant voltage driver, different placements are necessary to avoid voltage drop issues from the first light fitting.

Driver Calculations

Each driver must be matched with the specific load and voltage requirements of the circuit it controls; otherwise, damage may occur.

Drawing Conversion

Each driver must be matched with the specific load and voltage requirements of the circuit it controls; otherwise, damage may occur.

Linear Voltage Drop

Each driver must be matched with the specific load and voltage requirements of the circuit it controls; otherwise, damage may occur.

What is Lighting Design.

Lighting is a powerful tool in interior design that can significantly alter the mood and atmosphere of both indoor and outdoor spaces. It can affect human emotions and impact an individual's well-being. Besides creating focal points, lighting should also highlight natural features in the environment by drawing out and focusing the eye on them.

We have a reputation for creating exceptional lighting designs that are timeless classics. We merge elements of brilliant creativity and technical expertise, with careful consideration for the architecture, interior design, and the story that is situated behind every project.

Our core focus is to create exceptional lighting designs for luxurious interiors and exteriors worldwide. We possess the expertise to work with any environment style, ranging from classical residences to modern architectural masterpieces.

What We Do.

Extensive Project Management

We have a dedicated support member who is on hand to answer any questions that might arise on site.

World-Class Lighting Design

Our extensive 25 years in the lighting industry provides us with an unique understanding of what it takes to create amazing lighting solutions.

Product Placement Break Down

Our comprehensive lighting plans consist of a detailed breakdown of each lighting location, specifying the optimal placement for each light and the recommended distance between them.

On-Site Installation and Integration

If required, we can be with you every step of the way throughout the project. We have the skills and experience to offer you a wide range of services, from lighting design to full installation, ensuring that you receive the best possible service from start to finish.

Technical Service Package

All of our detailed lighting designs come with a full technical breakdown, helping the project to run smoothly throughout.
